## Your Performance

Your Test Result
PASS

Your Score
529

Your Performance Compared to Others

The chart below represents the distribution of scores for all senior students enrolled in veterinary schools accredited by the Council on Education of the American Veterinary Medical Association who took the examination for the first time between November 18, 2019 and December 14, 2019 under standard testing conditions. Reported scores range from 200 – 800 with a mean of 499 and a standard deviation of 65.

The North American Veterinary Licensing Examination (NAVLE) is designed to provide a comprehensive objective measurement of your knowledge of veterinary medicine as it relates to entry-level private clinical practice. The examination assesses knowledge of veterinary practice involving all animal species commonly seen by private practitioners in North America as well as the skills and competencies necessary to perform in practice. NAVLE results are reported to state and provincial boards responsible for the licensing of veterinarians.

Your pass/fail test result is based on a minimum passing score of 425 recommended by the International Council for Veterinary Assessment (ICVA) to pass the NAVLE. Individual licensing authorities may accept the ICVA recommended pass/fail result or may establish a different passing score for their own jurisdictions.

If you tested repeatedly under the same conditions on a different set of items covering the same content, without learning or forgetting, your score would fall within one standard error (SE) of your current score two-thirds of the time. The SE on this exam is 28 points.

Your score +/ - SE: 501 - 557

Your Relative Strengths And Weaknesses

The boxes below indicate your areas of relatively lower or higher performance in each content area compared to all senior students enrolled in veterinary schools accredited by the Council on Education of the American Veterinary Medical Association who took the examination for the first time between November 18, 2019 and December 14, 2019 under standard testing conditions (the comparison group). The percentage range of items from each content area on the NAVLE is also indicated below. This information can be used to identify areas of strength and weakness to guide future study. Because the exam is highly integrative, ICVA recommends reviewing all content areas if retaking the test.

Strengths and Weaknesses Relative to the Comparison Group: An orange box in the "Higher" column indicates that your performance in that area was higher than the average performance of the comparison group. An orange box in the "Average" column indicates that your performance in that area was average relative to the performance of the comparison group. An orange box in the "Lower" column indicates that your performance in that area was lower than the average performance of the comparison group.

This information is intended only for educational purposes. No decisions are based on information presented in this portion of the report. Descriptions of the topics covered in these content areas, as well as other topics covered on the NAVLE, can be found in the information materials on the ICVA website (https://www.icva.net).

Performance by Species Relative to the Comparison Group

	(% Items Per Test)	Lower	Average	Higher
Canine	(24-28%)		■	
Feline	(22-26%)		■	
Equine	(13-17%)		■	
Bovine	(11-15%)			■
Porcine	(3-7%)		■	

Performance by Competency Relative to the Comparison Group

	(% Items Per Test)	Lower	Average	Higher
Clinical Practice	(68-72%)			■
Preventive Medicine and Animal Welfare	(13-17%)		■	
Communication	(6-10%)		■	
Professionalism, Practice Management, and Wellness	(5-9%)		■
